ABOUT EEC

EEC was founded in 1997 by John Clark after vehicle manufacturers began installing Catalytic Converters as standard in the early 1990's. John was already a well established figure in the Automotive Exhaust industry and his experience and wealth of knowledge ensured the success of the company. EEC remains a family owned business and since its creation has grown to become one of the largest manufacturers of Type approved Catalysts for the UK and European automotive aftermarket.

We manufacture and stock over 3,750 different direct fit Catalysts, DPFs, Front Pipes and Exhausts. We comply with all European Type Approval legislations to meet our customer's needs, EEC has since expanded its portfolio of products which now includes Exhaust accessories and additives.

We have Invested in obtaining the highest level of certification for our data and production processes, so you can trust that not only will we deliver the best possible product information but also adhere to the best possible environmental practices.

EEC Group of Companies

European Exhaust & Catalyst

Revcoat
Technologies

Catalyseurs.fr

Located near Portsmouth, England - Denmead is the Head Office and main manufacturing, development and distribution base for EEC's Group of companies. Our teams for UK / Export sales and technical support are based here along with management, finance and purchasing. To meet our expansion needs and allow us to extend our production and distribution capabilities, we opened an additional manufacturing site in Stone, Staffordshire.

The EEC Group of Companies operate from over 80,000 sq ft. throughout the United Kingdom and France and employ over 100 highly skilled and hardworking staff.

Situated in Waterlooville, England - Revcoat provides catalyst and coating solutions to a wide variety of markets on a worldwide basis. Certified with ISO 9001: 2015, our coating capabilities span from small pollution control devices used for appliance applications and small stationary combustion engines to automotive catalyst and large industrial units used for large volume exhaust treatment.

As one of the only coating plants in the UK, Revcoat allows EEC to go that one step further to providing the very latest products, including a wide range of Diesel particulate filters.

Based in Mazeres near Toulouse, EEC France is the European distribution point for the EEC Group of Companies. The site allows next day delivery across France and swift deliveries across the rest of Europe and beyond, as well as drop shipping capabilities. Operating from a 7,500sq ft. site, with a French and English speaking team, EEC France can provide EEC's full range of products as well as parts advice, technical assistance, on road support and emissions training. The extensive range of products available means EEC France is the one-stop-shop for all the emissions needs of our European customer base.

Based in Stone, England - Prolazer Components Ltd. Is our dedicated precision engineering facility servicing internal and external customers with high precision, cost effective solutions to satisfy individual requirement.

Operating from over 18,000 sq ft Prolazer Components Ltd. boasts an impressive array of state the art machinery to complement our laser cutting and CNC Machining capabilities enabling us to service sectors including Automotive, Construction, Agricultural & Yellow goods and Medical, as well as providing solutions for individual bespoke commissions. With the ability to undertake projects from concept to customer, our highly skilled engineering team has the capability to meet the needs of the most discerning customer.

UK SALES

We recognise that our trading success depends on a well supported network of distributors and motor factors. Our Sales Managers will help you grow your emissions business through stock management guidance, technical support to increase confidence, plus useful industry knowledge and statistics to help you achieve the best results from your emissions portfolio.

We can offer overnight deliveries to the majority of mainland UK and a drop ship service for the rising online market.

Our flexible stock support, competitive pricing and range guidance allows you the confidence to know you won't be left with product on the shelf.

Emissions Training Programme includes:

- Highly experienced Technical Trainer
- The Importance of the exhaust system
- How a catalytic converter works
- Fault finding using a gas 4 analyser
- All about DPF's
- Fault finding and regenerating a DPF
- Demonstrations of the EEC DPF

PRODUCT RANGE

At EEC we manufacture over 3,750 parts for 65 vehicle manufacturers, covering over 18,000 different applications across our core products ranges. EEC manufactures all of its Catalytic Converters and Diesel Particulate Filters in the UK.

Using over 45 years of experience in the automotive aftermarket, EEC have sourced from and made strategic alliances with a number of continental exhaust manufacturers.

Using close business relationships across the globe, EEC also offer an expanding range of quality products sourced from the leading manufacturers in that market.

To complement our core product range, we also produce a range of front pipes, exhaust accessories and emissions additives.

- Type Approved Catalytic Converters
- SCR Catalysts
- Cordierite Diesel Particulate Filters
- Silicon Carbide (SIC) Diesel Particulate Filters
- Front Pipes
- Flexible Couplings
- Pipe Connectors
- Exhausts
- Comprehensive Fitting Kits
- 6 in 1 Diesel and Petrol Fuel Additives
- ProGen-R8 (FAP) Eolys replacement fluid

Our Promise to you...

- Next Day service available, UK mainland
- 2 Year Warranty on all catalytic converter, DPF and Exhaust Products
- Dedicated Sales and Technical Teams
- Regular stock re-profiling to ensure the right stock on your shelf at the right time
- A friendly, dedicated Sales Manager to take care of stock profiles, marketing and part movement analysis
- Support through marketing funds, trade shows, workouts, flyers and marketing POS Materials
- Loyal supply to you and not your customer base
- Reviews of part movement to make sure you are aware of what sells

MANUFACTURING CAPABILITY

Laser Cutting

A brace of Trumpf CNC Laser cutting machines enable the precise cutting of materials up to 20mm in thickness to a tolerance of $\pm 0.10\text{mm}$. A team of skilled draughtsmen have the capability to design and engineer components for almost any application, as well as translate customer drawings to provide exceptional solutions quickly for on and off road requirements.

CNC Machining Centre

CNC machines from XYZ and Mori Seiki enable our highly skilled technicians to produce a diverse range of products to exacting tolerances. Optimised cycle times enable us to considerably shorten lead times and dramatically increase flexibility in order to meet the customers needs.

A bank of numerically controlled milling machines accompany our XYZ Mini Mill CNC machining centre, allowing us to machine an amazing range of complex, high quality products. Qualified machinists work meticulously to maintain high standards of quality, productivity and cost effectiveness.

Welding Capability

Technically skilled manual welders accompany automated robot systems from Comau and Semi automated weld Lathe systems to provide first class quality and functionality of product. Our manual welders are periodically tested to ensure weld integrity and skill base is satisfactorily high.

Tube Manipulation

Our equipment list consists of 6 CNC benders from Addison Herber and YLM. Incorporating both empty and mandrel capability as tight as 1D; where constant diameters can be guaranteed throughout the manipulated tube. A substantial array of ancillary machines ensures the repeatability of any customer end finish specification
